- ▶ The AAU logo is covered by copyright rules. I have used the logo from <http://aau.designguides.dk>. As long as you use the theme for making presentations in connection with your work at AAU, you are allowed to use the AAU logo.
- ▶ The rest of the theme is provided under the GNU General Public License v. 3 (GPLv3). This basically means that you can redistribute it and/or modify it under the same license. For more information on the GPL license see <http://www.gnu.org/licenses/>

The theme consists of four files

1. `beamerthemeAAUsidebar.sty`
2. `beamerinnerthemeAAUsidebar.sty`
3. `beamerouterthemeAAUsidebar.sty`
4. `beamercolorthemeAAUsidebar.sty`

The theme can either be installed for local or global use.

The theme consists of four files

1. `beamerthemeAAUsidebar.sty`
2. `beamerinnerthemeAAUsidebar.sty`
3. `beamerouterthemeAAUsidebar.sty`
4. `beamercolorthemeAAUsidebar.sty`

The theme can either be installed for local or global use.

Local Installation

The simplest way of installing the theme is by placing the four theme files in the same folder as your presentation. When you download the theme, the four theme files are located in the `local` folder.

Global Installation

- ▶ If you wish to make the theme globally available, you must put the files in your local latex directory tree. The location of the root of the local directory tree depends on the operating system and the latex distribution. On the following slides, you can read the instructions for some common setups.
- ▶ When you download the theme, the four theme files are embedded in a directory structure (in the `global` folder) ready to be copied directly to the root of your local directory tree.
- ▶ On the following slides, we refer to this directory structure as `<dirstruct>`. **Note** that some parts of the directory may already exist if you have installed other packages in your local latex directory tree. If this is the case, you simply merge `<dirstruct>` with your existing setup.

5

19

Ubuntu with TeX Live

1. Place the <dirstruct> in the root of your local latex directory tree. By default it is
`~/texmf`
 If the root does not exist, create it. The symbol ~ refers to your home folder, i.e., /home/<username>
2. In a terminal run
`$ texhash ~/texmf`

Windows with MiKTeX

Apparently, MiKTeX does not include a local latex directory tree by default. Therefore, you first have to create it.

1. To do this, create a folder `<somewhere>` named, e.g., `texmf`
2. Add this folder in the Roots tab of the MiKTeX Settings dialog
3. Place the `<dirstruct>` in your newly created local latex directory tree
`<somewhere>\texmf`
4. Open the MiKTeX Settings dialog and click Refresh FNDB.

Windows with TeX Live

In the advanced TeX Live Installer, you can manually change the default position of the root of the local latex directory tree. However, we assume the default position below.

1. Place the <dirstruct> in your local latex directory tree
`%USERPROFILE%\texmf`
If it does not exist, create it. In XP %USERPROFILE% is
`c:\Document and Settings\<username>`
by default, and in Vista and above it is by default
`c:\Users\<username>`
2. Open the TeX Live Manager dialog and select 'Update filename database' under 'Actions'.

Of course, you have to have the Beamer class installed. In addition, the theme loads two packages

- ▶ TikZ¹
- ▶ calc

These packages are very common and should therefore be included in your latex distribution.

¹By the way, TikZ is an awesome package for creating beautiful graphics. If you do not believe me, then have a look at these [online examples](#) or the [pgf user manual](#). If you want to create beautiful plots, you should use the [pgfplots](#) package which is based on TikZ.

The Presentation Theme

It is very simple to load the presentation theme. Just type `\usetheme[<options>]{AAUsidebar}` which is exactly the same way other beamer presentation themes are loaded. The presentation theme loads the inner, outer and color AAU sidebar theme files and passes the `<options>` on to these files.

The Inner Theme

You can load the inner theme directly by `\useinnertheme{AAUsidebar}` and it has no options.

The Outer Theme

You can load the outer theme directly by

```
\useoutertheme[<options>]{AAUsidebar}
```

Currently, the theme options are

- ▶ `hidetitle`: Hide the (short) title in the sidebar
- ▶ `hideauthor`: hide the (short) author in the sidebar
- ▶ `hideinstitute`: hide the (short) institute in the bottom of the sidebar
- ▶ `shownavsym`: show the navigation symbols
- ▶ `left` or `right`: position of the sidebar (default is right)
- ▶ `width=<length>`: width of the sidebar (default is 2 cm).
- ▶ `hideothersubsections`: hide all subsections but the subsections in the current section
- ▶ `hideallsubsections`: hide all subsections

The last four options are inherited from the outer sidebar theme.

Compiling Your Presentation With the AAU Sidebar Theme

Unlike most other beamer themes, this theme must be compiled at least **three** times to make everything look right. For most other themes, you do not have to compile your presentation more than two times. For the AAU sidebar theme, the third compilation is necessary to determine the position of the circle with the current frame number.

- ▶ The default configuration of fonts, colors, and layout complies with the AAU design guidelines and is the **official** version of the theme.
- ▶ However, you can easily modify specific elements of the theme through the template system provided by the beamer class. Please refer to the beamer user manual for instructions.
- ▶ For example, on this slide we have used
 - ▶ Change the sidebar colors:

```
\setbeamercolor{AAUsidebar}{fg=gray!50,bg=gray}
\setbeamercolor{sidebar}{bg=red!20}
```
 - ▶ Change the color of the structural elements:

```
\setbeamercolor{structure}{fg=red}
```
 - ▶ Change the frame title text color and background:

```
\setbeamercolor{frametitle}{use=structure,
fg=structure.fg,bg=red!5}
```
 - ▶ Change the background color of the text

```
\setbeamercolor{normal text}{bg=gray!20}
```

The AAU Waves Background Image

- In this documentation, the title page frame and the last frame have the AAU waves as the background image. The AAU waves background image can be added to any single frame by wrapping a frame in the following way

```
{\aauwavesbg
```

```
\begin{frame}[<options>]{Frame Title}{Frame  
Subtitle}
```

```
...
```

```
\end{frame}}
```

15

The AAU Waves Background Image

- In this documentation, the title page frame and the last frame have the AAU waves as the background image. The AAU waves background image can be added to any single frame by wrapping a frame in the following way

```
{\aauwavesbg
```

```
\begin{frame}[<options>]{Frame Title}{Frame  
Subtitle}
```

```
...
```

```
\end{frame}}
```

- Ideally, I would like to create a new frame option called `aauwavesbg` which can enable the AAU waves background. However, I have not been able to figure out how such an option can be added. If you know how this can be done, please contact me.

Widescreen Support

Newer projectors and almost any modern TV support a widescreen format such as 16:10 or 16:9. Beamer (\geq v. 3.10) supports various aspect ratios of the slides. According to section 8.3 on page 77 of the Beamer user guide v. 3.10, you can write

```
\documentclass[aspectratio=1610]{beamer}
```

to get slides with an aspect ratio of 16:10. You can also use 169, 149, 54, 43 (default), and 32 to get other aspect ratios.

Overlapping footnote You might have problems with a too wide footnote text width. This is problem with older versions of Beamer, and it can be resolved by updating Beamer to a newer version. You can read more about it in [this bugreport](#).
